

Installing maps on your Garmin GPS device using a MAC (January 2010)

1. Open Garmin MapInstall. (Please ensure your unit is connected to the computer and your maps are unlocked, if they are not unlocked please refer to our step-by-step guide on unlocking your Garmin map product)

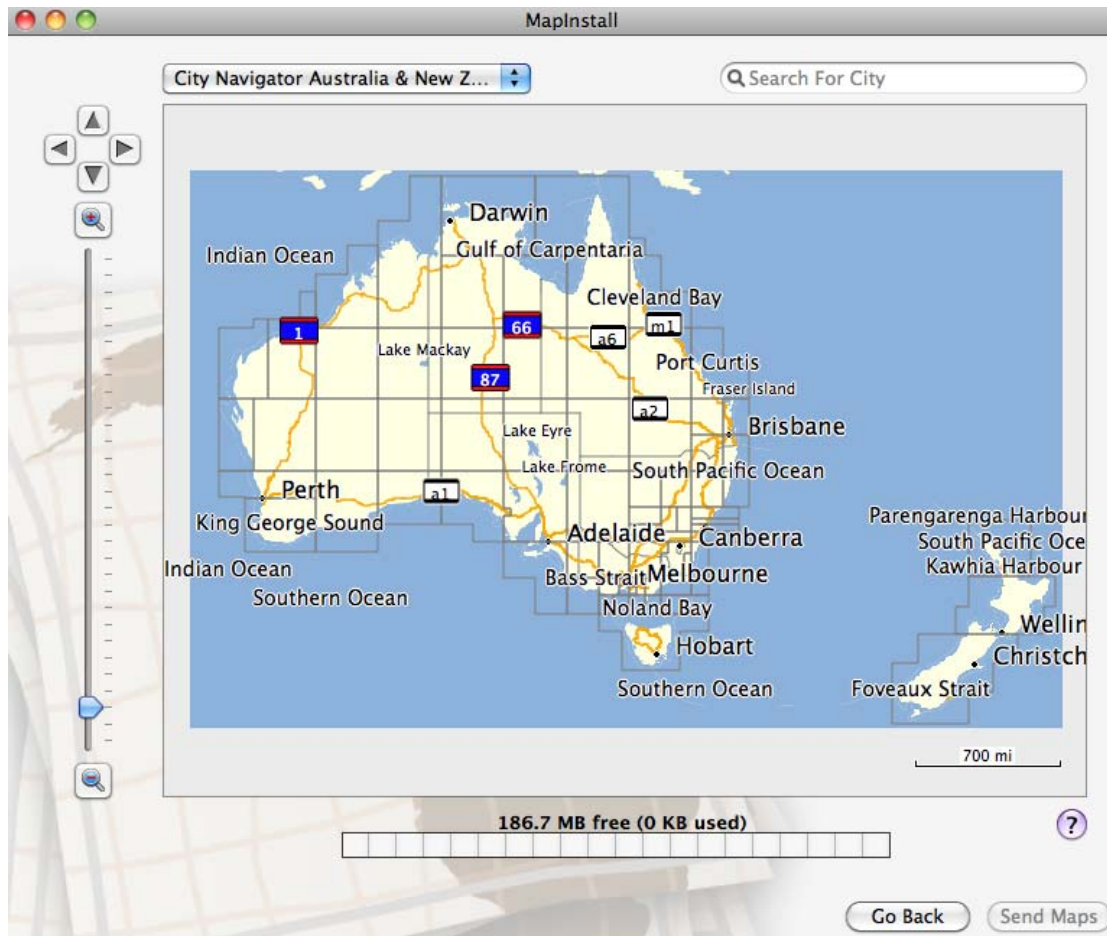

Click continue.

2. You will be asked to select which device you want to install your Garmin map product to. Select the device from the menu.

Click continue.

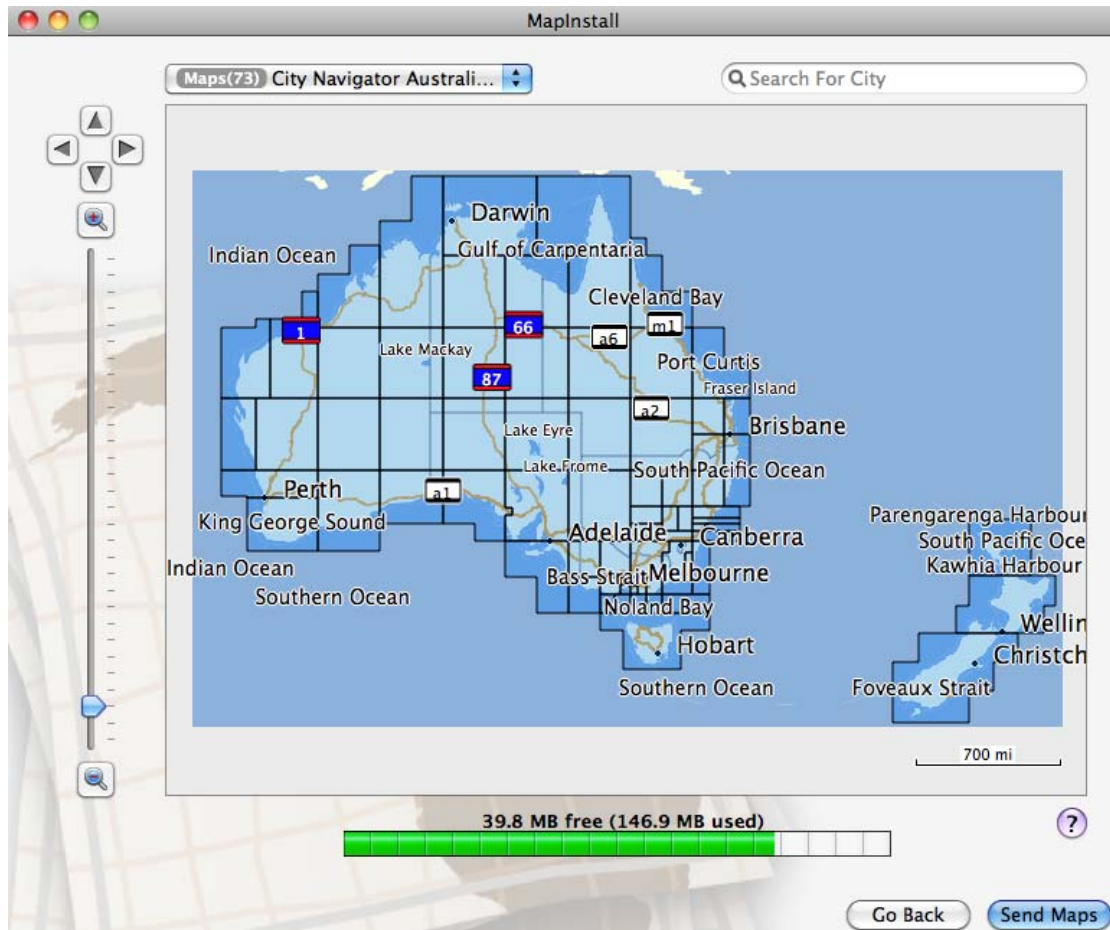

3. You will then be presented with your unlocked Map Product, in this instance we have City Navigator Australia & New Zealand.

Notice there are tiles over the certain areas of Australia, if you hover your mouse over the tiles they will highlight yellow. These tiles you can select separately if you are only wanting to install a certain area into your Garmin unit.

In this instance we will be installing the whole of Australia and New Zealand. To select all regions,

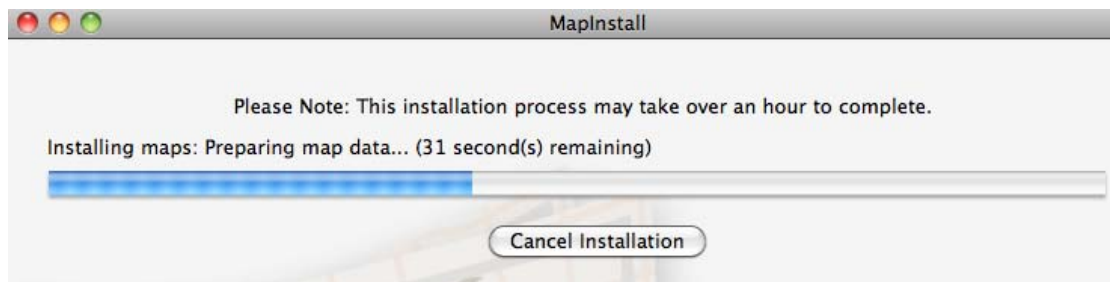

4. Click and hold down on the top left hand corner of the Indian Ocean (Must be in the blue area) then drag down to the bottom right hand corner of New Zealand then de-click.

You will notice that Australia and New Zealand are now shaded in blue, this confirms that both regions have been selected.

5, Once you are happy with your selection, Press Send Maps.

MapInstall will then go through the process of sending the Map Product into your selected destination whether it may be direct onto the Garmin GPS unit or to a external storage device.

6. Once installation is complete, Click Done. You may now disconnect your Garmin GPS device or storage device and resume normal operation.
