

Systems Test Engineer

Enriching lives, transforming navigation

Garmin is the global leader in satellite navigation and is committed to creating products that can enhance our customers' worlds, complement active lifestyles and transform GPS navigation.

Garmin sat-navs can now be found in cars, on mobile phones, for sport, fitness and outdoor adventure and this year the company celebrates its 20th anniversary.

Garmin are now looking for talented Systems Test Engineer to enhance the quality of Garmin's handset & consumer products across Europe. This role is an exciting opportunity for you to apply your experience, to set testing strategies and provide local feedback to product managers and Engineer; contributing in the continued development of Garmin's range of products.

ESSENTIAL FUNCTIONS:

- Test Garmin mobile, consumer and OEM automotive navigation products in region of responsibility
- Take active role in creating test process, priorities & test strategies
- Develop and execute test cases and communicate test results
- Perform exploratory testing
- Communicate defects through appropriate process and verify the fixes
- Verify language translations in language of responsibility
- Collect data as necessary to qualify the vendor for given Garmin connected service
- Collect and capitalize regional knowledge on region of responsibility to support the development teams
- Collect, document and verify defects provided by local distributors and users and provide feedback to development teams to fix the defect including logs and performing retesting
- Partner with regional office leadership to identify customer feedback that warrants additional testing and communicate test strategies and results as appropriate

OTHER RESPONSIBILITIES:

- Support other Garmin departments as assigned
- Perform other job related duties as assigned

EDUCATION, EXPERIENCE, AND SKILLS REQUIRED:

- Bachelor's degree or equivalent in an engineering related field
- Excellent academics
- Minimum of three years experience in engineering quality assurance, product localization, and/or field support
- Experience in software quality assurance processes and methodologies
- Experience in developing and executing test plans and reporting test results
- Superior organizational and analytical skills, driven and self-motivated
- Excellent verbal and written communication skills

- Native speaker of primary language in region of responsibility
- English proficiency (written and verbal)
- Willingness to travel mostly within region of responsibility approximately 20% of the time

DESIREABLE QUALIFICATIONS:

- Experience in consumer electronics device testing, ideally in the navigation industry
