

GARMIN[®]

Navigation Data Alert 26033

TO: Users of the Garmin Navigation Database
DATE: March 18, 2026
CYCLE: 2602 & 2603
SUBJECT: Low Advisory Vertical Descent Glide Path

PRODUCT AFFECTED

Cycles 2602 and 2603 of the Garmin Navigation Database (effective February 19, 2026 and March 19, 2026) are affected.

NOTE

This Data Alert does not apply to the Jeppesen NavData database.

DESCRIPTION

The RNP VISUAL V RWY 33 at LOWS, Salzburg, Austria, contains an advisory vertical (+V) descent path that crosses substantially under the published minimum altitude of 5000 feet at the final approach fix (WS834) and 3980 feet at the missed approach point (WS835).

PILOT ACTION

Do not use the RNP VISUAL V RWY 33 in Garmin systems in cycle 2602 or 2603.

RESOLUTION

In cycle 2604, Garmin will adjust the advisory vertical (+V) descent path altitudes, as well as extend the final approach past the charted missed approach point to the Runway 33 threshold in order to provide advisory lateral and vertical guidance between the charted missed approach point and the runway threshold.

THIS ALERT SHOULD BE MADE AVAILABLE TO ALL USERS OF GARMIN AVIATION UNITS OR SYSTEMS UTILIZING THE GARMIN NAVIGATION DATABASE

Alerts are written for the currently effective cycle and next cycle. It is possible that data from prior cycles is also affected. Garmin recommends using the latest effective data cycle.

Garmin requests the flight crew report any observed discrepancies related to database information. These discrepancies could come in the form of an incorrect procedure, incorrectly identified terrain, obstacles, fixes, or any other displayed item used for navigation or communication in the air or on the ground. Go to FlyGarmin.com and select "Aviation Data Error Report."
